QR CODES

MARKETING IN THE
DIGITAL AGE

GOLSERVICES.COM

A quick response code is a type of barcode that contains a matrix of dots. It can be scanned using a QR Scanner or a smartphone with a built-in camera. Once scanned your phone or tablet might open a URL in your phone's web browser.

Once the QR Code is scanned on a print ad it will redirect to the URL of choice for the client.

Websites, Social Media pages, and temporary pages (developed by ACS) can also be used.

Ads can either be directed to an online ad on jamaica-gleaner.com or directed to a URL.

The QR Code stays active on all print ads
